OnePlan

Accelerate Mission Delivery: Choose OnePlan for Federal Program Portfolio Management

Federal agencies must deliver more mission outcomes with constrained budgets, changing mandates, and finite workforce capacity. Leaders need to prioritize investments, resolve resource conflicts, and respond quickly to change.

OnePlan connects mission objectives, investment decisions, program execution, and results. Its extensive Program Portfolio Management capabilities, integrations, role-based pricing, and phased adoption give agencies a compelling path to **PMO modernization**.

FedRAMP certification strengthens that proposition. Emerging AI connectivity expands access to program information.

ONEPLAN BRINGS THREE PRIORITIES TOGETHER

- **Deeper capability**
- **Greater value**
- **Faster mission impact**

FedRAMP certification opens the door

OnePlan announced its FedRAMP High, Class D certification on October 5, 2026, following its work with Project Hosts. Federal agencies can now evaluate OnePlan in a certified government environment. Read the certification announcement.

This milestone brings OnePlan's broader value proposition into focus: **comprehensive capabilities, a sustainable operating cost, and an achievable adoption path.**

FedRAMP High (Class D) Certified

PRIORITIZATION

VISIBILITY ACROSS SILOS

Enable true prioritization across agency silos

OnePlan brings IT, line-of-business, and operational plans into a single inventory. Leaders gain visibility across silos and a common basis for comparing mission value, funding, capacity, and risk.

That transparency enables true prioritization across the full set of agency commitments.

Strategy, intake, and scenario planning help leaders compare investments and move the selected scenario into execution.

SCENARIO

Consider a department balancing public-service modernization, infrastructure improvements, and a mandated operational initiative. Together, those programs may exceed funding or require the same specialists.

ONEPLAN HELPS LEADERS ANSWER

01
Which programs contribute most to mission objectives?

02
Which commitments must proceed, and which can wait?

03
Where do programs compete for scarce skills?

04
How will funding changes affect outcomes?

Those answers support achievable commitments and defensible decisions across the agency.

Maximize your Microsoft investment, and integrate with others

OnePlan builds on agencies' Microsoft technology, employee skills, and established working practices. Its government offering supports **Microsoft Teams, Project, and Planner**, alongside deployment on **Azure Government**. Explore OnePlan for Government at oneplan.ai/fedramp.

OneConnect also connects tools such as Jira, ServiceNow, and Smartsheet. Agencies can evaluate available government connectors to bring work from multiple systems into a common portfolio view.

The benefits:

PROGRAM MANAGERS
gain dependency visibility

PROJECT MANAGERS
retain scheduling practices

TEAMS
continue using familiar execution tools

EXECUTIVES
gain portfolio governance, resource planning, and financial insight

This approach supports **faster adoption**, reduces duplicate updates and manual briefings, and **maximizes Microsoft investments** while extending oversight to work managed elsewhere.

CONNECTED PLANNING

FASTER OUTCOMES

Connect funding, workforce capacity, and execution

A milestone change shifts staffing needs. A capacity gap delays delivery. A rising forecast forces leaders to reconsider commitments.

OnePlan connects **work, resource, and financial planning** in a shared platform. Strategy execution, portfolio governance, and scenario modeling align those plans with agency priorities.

EXAMPLE: MODERNIZATION PROGRAM

For a modernization program spanning applications, infrastructure, training, and organizational change, separate reports can obscure critical dependencies. A connected program structure exposes those relationships and helps leaders assess the feasibility and consequences of an intervention.

Leaders can see what changed, which commitments face risk, and where action can improve delivery.

Shorten the adoption lifecycle to accelerate outcomes

OnePlan emphasizes expert-led configuration, phased implementation, and benefits tracking against the target end state. Each phase delivers usable capability.

ORGANIZE ADOPTION AROUND THREE OUTCOMES

01

Establish visibility.

Consolidate initiatives, connect them to objectives, assign owners, and establish a status baseline.

02

Expose constraints.

Add resource and financial planning where funding and capacity most affect performance.

03

Expand decision support.

Extend integrations, scenario planning, benefits tracking, and approved AI capabilities.

Measure each phase by the activity it improves: leadership reviews, resource decisions, or funding analysis.

Larger implementations often require extensive customization, longer development and testing cycles, and coordinated change across teams. Phased adoption creates opportunities for earlier value.

Validate timelines against data readiness, integrations, authorization requirements, and staffing. Make time to first measurable benefit a selection criterion.

AI DECISION SUPPORT

CHOOSE ONEPLAN

Bring AI into program decision support

OnePlan's November 6, 2026 release notes describe the **OnePlan MCP Server** preview. Through the Model Context Protocol, compatible assistants such as Microsoft Copilot and Claude can explore data and perform supported updates within each user's OnePlan permissions. Click here to **review the MCP preview notes** or search "oneplan.ai release notes"

This connectivity can help leaders investigate capacity conflicts, examine financial variances, and reach informed decisions with less administrative effort. OnePlan supplies the connected program, resource, and financial information those decisions require.

Choose a platform that advances the mission

These strengths address the central federal challenge: **deliver more mission value with limited resources.** FedRAMP certification strengthens the foundation, while emerging AI connectivity expands decision support.

OnePlan combines comprehensive Program Portfolio Management, transparency across silos, Microsoft and third-party integrations, value-focused licensing, and phased adoption.

TEST THAT PROPOSITION WITH

- Competing programs
- A constrained budget
- Scarce specialists
- A leadership decision

ASK ONEPLAN TO DEMONSTRATE

01 True prioritization

02 The first phase's benefit

03 The full operating cost

Request an agency-specific OnePlan demonstration to maximize existing investments, shorten adoption, and accelerate mission delivery.
